Education

Keshav Memorial Institute of Technology

B.Tech in Computer Science (AIML), CGPA: 9.425

Expected May 2027

Hyderabad, India

FIITJEE Junior College

Intermediate (State Board: MPC), Percentage: 95.4%

March 2023

Hyderabad, India

Projects

Expression Analysis for Dyslexic Kids | Computer Vision, MERN Stack, Deep Learning

August 2024

- Built a facial expression-based sentiment analysis system to classify emotional states of dyslexic children during educational gameplay using deep learning and computer vision.
- Utilized a VIT based model achieving ~85% emotion classification accuracy across key expressions.
- Developed responsive and user-friendly UI components using React.js to enhance user experience.
- GitHub Link:** https://github.com/PranavKasanagottu/Expression_Analysis

CodeGenie - AI-Powered Coding Assistant | VS Code Extension, LLM, DeepSeek Coder

February 2025

- Architected a VS Code extension that generates context aware code snippets using DeepSeek Coder, supporting real time prompts and inline suggestions.
- Integrated GPU accelerated inference on an RTX 4090, reducing average response latency to <1.2s per prompt during testing.
- Implemented request handling and prompt structuring to improve code relevance, achieving ~70% acceptance rate of generated snippets in sample workflows.
- GitHub Link:** <https://github.com/kmitofficial/CodeGenie-G335-PS25>

FusionCast – Supply Chain Demand Forecasting | Python, CNN, LSTM, GRU, XAI

July 2025

- Designed a Multi-Channel Data Fusion Network (MCDFN) with parallel CNN, LSTM, and GRU branches to model multivariate demand time-series data.
- Improved forecasting performance by ~18% lower RMSE compared to single model baselines on historical supply chain datasets.
- Refined ShapTime and Permutation Feature Importance to explain temporal and feature level contributions to forecasts.
- Enabled interpretable demand predictions to support inventory and planning decisions by linking model outputs with key drivers.
- GitHub Link:** <https://github.com/PranavKasanagottu/FusionCast>

Technical Skills

Programming Languages: Java, Python, C++, C, JavaScript

AI/ML Technologies: Machine Learning, Deep Learning, Natural Language Processing (NLP), GANs, Explainable AI (XAI), LLMs

Database Technologies: MySQL, MongoDB

Web & UI Development: HTML, CSS, React.js, Node.js, Express.js

Tools & Platforms: Git, GitHub, Docker, Maven, Jenkins, AWS

Core Concepts: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, System Design

Achievements and Certifications

- Earned **GDG Study Jams** certification through hands-on labs covering Google Cloud services.
- Winner – CoinQuest Hackathon:** Built Pharmaceutical Management App using Python.
- Runner-up – Prakalp Project Expo:** Awarded for technical excellence in Human Resources Category.
- Selected for a **Centific internship** through Centific Premier Hackathon 2.0 after developing an Agentic AI solution in a 14-day competition.
- Solved **900+ algorithmic problems on LeetCode** with a contest rating of 1920, placing in the top ~5% globally.
- Completed **Full Stack Web Development** and **System Design** certification courses on Udemy.
